

TSA Crusher v1.1 Release Notes

This document provides a high-level description of the new features offered in each version of TSA Crusher. Only the main features in each release are identified.

TSA Crusher-v1.1	January 2010
-------------------------	---------------------

- Added support for including the TSA Policy OID in TSP request messages.
- An SSL trust management utility is provided, which is needed to trust SSL Server certificates within TSA Crusher in case TSP is being used over an SSL/TLS session.
- The bundled JRE version has been upgraded from Java 1.5 to Java 1.6.
- BER-encoded TSP request and response files are saved within the /logs directory for debugging purposes.
- Resolved an issue within TSA Crusher concerning FreeTextString which was affecting interoperability with other TSAs.
- Various log message improvements.
